Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

SECTION 1 - CONFLICT MINERALS DISCLOSURE

Item 1.01  Conflict Minerals Disclosure and Report

Luminex Corporation evaluated its current product lines and determined that certain products we manufacture contain tin, tungsten, tantalum and/or gold.

Conflict Minerals Disclosure

A copy of Luminex Corporation's Conflict Minerals Report is provided as Exhibit 1.01 hereto and is publicly available at www.luminexcorp.com/about-luminex/corporate-responsibility/.

Item 1.02  Exhibit

As specified in Section 2, Item 2.01 of this Form SD, the Company is hereby filing its Conflict Minerals Report as Exhibit 1.01 to this report.

SECTION 2 - EXHIBITS

Item 2.01  Exhibits

Exhibit 1.01  - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.
SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

LUMINEX CORPORATION

Date: May 30, 2019
By:  /s/ Harriss T. Currie
Name:  Harriss T. Currie
Title:  Chief Financial Officer, Senior Vice President of Finance
       (Principal Financial Officer)
This report for the year ended December 31, 2018 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the Rule). For the purposes of the required good faith reasonable country of origin inquiry (RCOI), Luminex continued to receive supply chain responses through April 30, 2019. The Rule was adopted by the Securities and Exchange Commission (SEC) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of their products. Conflict minerals are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are currently limited to tin, tantalum and tungsten (3TG). These requirements apply to registrants regardless of the geographic origin of the conflict minerals and whether or not they fund armed conflict.

If a registrant can establish that the conflict minerals originated from sources other than the Democratic Republic of the Congo (DRC) or an adjoining country (the Covered Countries), or did come from recycled and scrap sources, they must submit a Form SD which describes the RCOI completed.

If a registrant has reason to believe that any of the conflict minerals in their supply chain may have originated in the Covered Countries, or if they are unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the conflict minerals’ source and chain of custody that conforms to a nationally or internationally recognized framework. The registrant must annually file a report, a Conflict Minerals Report (CMR), with the SEC that includes a description of those due diligence measures.

As permitted by applicable guidance of the SEC, Luminex has not obtained an independent private sector audit of this report within the meaning of the Rule.

1. Company Overview

This report has been prepared by Luminex Corporation (herein referred to as “Luminex,” the “Company,” “we,” “us,” or “our”) and (except as otherwise specified herein) includes the activities of all subsidiaries that are required to be consolidated.

Luminex develops, manufactures and sells proprietary biological testing technologies and products with applications throughout the life sciences and diagnostics industries. These industries depend on a broad range of tests, called bioassays, to perform diagnostic tests and conduct life science research.

2. Products Overview

Luminex’s products are classified in the following categories: instruments, consumables, assays and reagents. We conducted an internal analysis of our products and found that conflict minerals are found in our instruments and assays. Our internal analysis determined that our consumables and reagents do not contain conflict minerals as they are made up of reagent grade or better chemicals and biological reagents not intentionally containing conflict minerals and they could contain only trace amounts of conflict minerals as a contaminant.

3. Supply Chain Overview

Luminex relies upon our suppliers to provide information on the origin of the 3TG contained in components and materials supplied to us, including sources of 3TG that are supplied to them from sub-tier suppliers. Our suppliers are requested to provide the 3TG sourcing information to us per our Conflict Minerals Policy.

In addition, we have performed an appropriate assessment of our instrument components, and the role that suppliers play throughout our manufacturing processes. We defined the scope of our conflict minerals due diligence by identifying, and using a third party service provider to reach out to our current suppliers that provide instrument and assay components or assemblies. We adopted the standard conflict minerals reporting templates established by the Responsible Minerals Initiative (formerly Conflict-Free Sourcing Initiative) (RMI), and using a third party service provider, delivered our conflict minerals due diligence communication survey to these suppliers.
We have historically purchased many of the components and raw materials used in our products from numerous suppliers worldwide. As we do not source directly from smelters or mines, we are working with our suppliers and third party service providers to understand the sources of the metals contained in our products. We rely upon our direct suppliers and third party service providers to provide information on the origin of the 3TG contained in instrument and assay components and materials supplied to us - including sources of 3TG that are supplied to them from their upstream supply chain sources. Contracts with our suppliers are frequently in force for three to five years or more and we cannot unilaterally impose new contract terms and flow-down requirements. As we enter into new contracts, or our contracts renew, we are seeking to add provisions that require suppliers to provide information about the source of conflict minerals and smelters. It will take a number of years to implement appropriate flow-down clauses in our supplier contracts. In the meantime, as described below, we are working with suppliers and third party service providers to obtain 3TG sourcing information.

4. RCOI

We conducted an assessment of our products and found that 3TG substances can be found in Luminex’s instruments such as our ARIES®, LX 100/200™, FLEXMAP 3D®, MAGPIX® and Verigene® products, including Verigene assays, herein referred to as our “Covered Products”. Based upon our due diligence efforts, we do not have sufficient information to conclusively determine the countries of origin of all of the 3TG in our Covered Products. However, based on the information provided by our suppliers, we have reason to believe that some of the 3TG contained in our Covered Products may have originated from Covered Countries or may not be from recycled or scrap sources.

In accordance with the Organization for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD Guidance) and the Rule, this report is publicly available on our website at www.luminexcorp.com/about-luminex/corporate-responsibility/.

5. Design of Due Diligence

Our due diligence measures have been designed to conform, in all material respects, with the five-step internationally recognized framework in OECD Guidance and the related supplements for 3TG. The subsections below describe our due diligence process based on the OECD Guidance.

Step 1: Establish Strong Company Management Systems

Luminex has adopted a Conflict Minerals Policy, which is posted on our website at www.luminexcorp.com/about-luminex/corporate-responsibility/.

Internal Team

Luminex has established a management system for conflict minerals that is led by the CFO and Vice President of Regulatory and Clinical Affairs as well as executive-level representatives and a team of individuals from relevant functions such as quality assurance, purchasing, document control, IT, and manufacturing engineering. This team is responsible for implementing our conflict minerals compliance strategy. Senior management is briefed about the results of our due diligence efforts on a periodic basis.

Control Systems

Controls include, but are not limited to, our Code of Conduct, which outlines expected behaviors for all Luminex employees and our requests that suppliers provide us with conflict mineral information, including the completion of the RMI Conflict Minerals Reporting Template (the RMI CMRT Template).

Supplier Engagement

With respect to the OECD due diligence guidance to strengthen engagement with suppliers, we are utilizing a third party service provider and our Purchasing department to contact suppliers in a supporting role to our Quality Assurance and Regulatory department. We have developed a supplier communication package to educate our suppliers of the information required of them. As we enter into new contracts, or our contracts renew, we seek to add provisions that require suppliers to provide information about the source of conflict minerals.
As we do not typically have a direct relationship with 3TG smelters and refiners, we are engaged and actively cooperate with other manufacturers. We rely upon the following industry-wide initiatives to disclose upstream actors in the supply chain: RMI, the ITRI Tin Supply Chain Initiative (iTSCi) and the Public Private Alliance for Responsible Minerals Trade (PPA).

**Grievance Mechanism**

We have multiple longstanding grievance mechanisms whereby employees and suppliers can report violations of Luminex’s policies. Our Technical Support department receives complaints and inquiries from customers, suppliers and partners for all Luminex supported products. Technical Support documents all customer communications, triages complaints as required, and leads investigations for issue resolution.

**Maintain Records**

We have a policy to retain relevant records. Luminex uses a third party service provider's database at this time to maintain reviewable business records.

Luminex has implemented PLM Product Governance and Compliance software to manage and retain compliance data related to conflict minerals utilizing both internal and external resources. This will also allow Luminex to show the long-term evolution and improvement of its program to its shareholders.

**Step 2: Identify and Assess Risk in the Supply Chain**

Because of our size, the complexity of our products, and the depth, breadth, and constant evolution of our supply chain, it is difficult to identify actors upstream from our direct suppliers. We have identified over 102 direct and indirect instrument and assay component suppliers. We rely upon these suppliers, whose components may contain 3TG, to provide us with information about the source of any conflict minerals contained in the components supplied to us. Both our direct and indirect suppliers are similarly reliant upon information provided by their suppliers. Many of the largest suppliers are also SEC registrants and subject to the Rule. When we identify a risk in the supply chain, we will generally engage with our direct supplier and develop a timeframe in which the risk can be mitigated, which may include taking appropriate steps to transition procurement from a different supplier.

**Step 3: Design and Implement a Strategy to Respond to Risks**

In response to this risk assessment, Luminex has instituted a risk management plan, through which risks are identified and mitigations developed. The conflict minerals program is implemented, managed and monitored through the RCOI due diligence plan.

As described above, we utilize many upstream resources in the following industry-wide initiatives to disclose upstream actors in the supply chain, including the Electronics Industry Citizenship Coalition-Global e-Sustainability Initiative (EICC-GeSI), RMI, the iTSCi and the PPA.

As part of our risk management plan, we have contracted with a third party service provider to use their software and services to conduct our RCOI. For 2018, these services involved sending the RMI CMRT Template to our instrument and assay component direct and indirect suppliers. The RMI CMRT Template contains instructions, definitions and a questionnaire that must be completed by an appropriate supplier representative. We communicate with our suppliers whom we have reason to believe are supplying us with 3TG from sources that may support conflict in the DRC or any adjoining country to establish an alternative source of 3TG that does not support such conflict, as provided in the OECD guidance. To date, we have found no instances where it determined to be necessary to terminate a contract or find a replacement supplier in response to our RCOI.

**Step 4: Carry out Independent Third Party Audit of Supply Chain Due Diligence at Identified Points in the Supply Chain**

In connection with our due diligence, we used information made available by the RMI concerning independent third-party audits of smelters and refiners but did not, and are not required to, obtain our own independent private sector audit of this report.
Step 5: Report on Supply Chain Due Diligence

In accordance with the OECD Guidance and the Rule, this report is publicly available on our website at www.luminexcorp.com/about-luminex/corporate-responsibility/.

6. Due Diligence Process and Results

Request Information

Through our use of a third party service provider's software and services, we conducted a survey of those suppliers described above using the RMI CMRT Template. The RMI CMRT Template includes questions regarding a company's conflict-free policy, engagement with its direct suppliers, and a listing of the smelters its suppliers use. In addition, the RMI CMRT Template contains questions about the origin of conflict minerals included in a company's products, as well as supplier due diligence. Written instructions and recorded training videos illustrating the use of the tool are available on RMI website.

Survey Responses

Luminex surveyed our identified instrument and assay component suppliers. Through our third party service provider, we received responses from approximately 65% of the suppliers surveyed. Our third party service provider reviewed the responses against criteria developed to determine which responses required further engagement with our suppliers. These criteria included untimely or incomplete responses as well as inconsistencies within the data reported in the RMI CMRT Template. In the future, we, along with our third party service provider, will work directly with these suppliers to provide revised responses.

A majority of the responses received provided data at a company or divisional level. Some were unable to specify all the smelters or refiners used for components supplied to Luminex. With the exception of a few suppliers, we are unable to determine whether any of the conflict minerals reported by the suppliers were contained in components or parts supplied to us or to validate that any of these smelters or refiners are actually in our supply chain.

Efforts to determine mine or location of origin

Through our use of guidance proposed by RMI and iTSCi, the OECD implementation programs, and requesting our suppliers to complete the RMI CMRT Template, we have determined that seeking information about 3TG smelters and refiners in our supply chain represents a reasonable process to determine the mines or locations of origin of the 3TG in our supply chain.

Smelters or Refiners

Supplier responses included the names of 412 entities listed by our suppliers as smelters or refiners. Approximately 26% of the entities listed by our suppliers as smelters or refiners were unable to be validated as in fact being smelters or refiners. Luminex believes that, to the extent reasonably determinable by Luminex, the facilities that were used to process the 3TG contained in the Covered Products included 305 facilities that were listed in the RMI CMRT Template as “known smelters or refineries,” or in the United States Department of Commerce's global list of “all known conflict mineral processing facilities worldwide” (collectively, Known Smelters or Refineries). Of these 305 Known Smelters or Refineries, 225 had received a “conflict free” designation from an independent third party audit program as of April 30, 2019. Based on these due diligence efforts, Luminex does not have sufficient information to determine all the facilities used to process necessary 3TG or to determine the mines or countries of origin of the 3TG contained in all of the Covered Products or whether the 3TG in all of the Covered Products are from recycled or scrap sources. Luminex continues to work with suppliers throughout its supply chain to re-validate, improve, and refine their reported information, taking into account supply chain fluctuations and other changes in status or scope and relationships over time.

Luminex believes that, to the extent reasonably determinable, the facilities that were used to process the 3TG contained in the Covered Products included the smelters and refiners listed in the table below. This table includes only facilities that are Known Smelters or Refineries.

</table>

RMAP Compliant indicates smelters or refiners that are conformant with the Responsible Mineral Assurance Process standards. Smelters or refiners with a “re-audit in process” are still considered RMAP Compliant.
7. Steps to Improve Due Diligence

We intend to take the following steps to continue to improve the due diligence conducted to mitigate risk that the necessary conflict minerals in our products could benefit armed groups in the DRC or adjoining countries:

a. Continue our efforts to include conflict minerals provisions in new or renewed supplier contracts.

b. Continue to engage with suppliers and direct them to training resources to attempt to increase the response rate and improve the content of the supplier survey responses.

c. Continue to engage any of our suppliers found to be supplying us with 3TG from sources that may support conflict in the DRC or any adjoining country to establish an alternative source of 3TG that does not support such conflict.

d. Continue to improve our best practices and build leverage over the supply chain in accordance with the OECD Guidance and other relevant trade associations.

e. Continue due diligence on new businesses acquired to assess the risk of conflict minerals in the acquired business supply chain.

Forward-looking Statements

This report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. All statements made in this report, other than statements of historical fact, are forward-looking statements. You can identify these statements from use of the words “may,” “should,” “could,” “potential,” “continue,” “plan,” “forecast,” “estimate,” “project,” “believe,” “intend,” “anticipate,” “expect,” “target,” “is likely,” “will,” or the negative of these terms, and similar expressions. These statements are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. We believe that our expectations are based on reasonable assumptions. However, these forward-looking statements involve known and unknown risks, uncertainties and other important factors that could cause our actual results, performance or achievements, or industry results, to differ materially from our expectations of future results, performance or achievements expressed or implied by these forward-looking statements. You should not place undue reliance on any forward-looking statements. Excepts as otherwise required by applicable laws, we undertake no obligation to publicly update or revise any forward-looking or other statements included in this report, whether as a result of new information, future events, changed circumstances or any other reason.
